CLINISCAN AI | Diagnostic Decision Support

REPORT: CLINI-TEST-ID
DATE: 2026-10-11 21:57:13

Patient ID:	TEST	**Age / Gender:**	50 / M
Clinical Indication:	test	**Model Architecture:**	YOLO11n (14 Pathologies)

CLINICAL IMPRESSION

Summary: Radiographic findings suspicious for Aortic enlargement, Cardiomegaly, Pleural effusion, Other lesion. Computer-aided bounding box detections indicate localized pathological features. Correlation with clinical symptomatology and dedicated specialist radiological review is recommended.

RADIOGRAPHIC LOCALIZATION & XAI HEATMAPS

1. Original CXR

2. YOLO11n Detections

3. Grad-CAM Heatmap

4. Superimposed Blend

LOCALIZED ABNORMALITIES (4 DETECTED)

#	Abnormality Class	Confidence	Anatomical Zone	Severity	Clinical Recommendation
1	**Aortic enlargement**	64.8%	Superior Mediastinum / Aortic Arch	Moderate	Contrast-enhanced chest CT or echocardiogram suggested if aneurysmal dilatation is suspected clinically.
2	**Cardiomegaly**	42.5%	Cardiac Silhouette / Pericardial Border	High	Echocardiogram and clinical evaluation for congestive heart failure, cardiomyopathy, or pericardial effusion.
3	**Pleural effusion**	33.9%	Costophrenic Angle / Basal Pleural Space	High	Thoracic ultrasonography, diagnostic thoracentesis if indicated, and evaluation for cardiopulmonary etiology.
4	**Other lesion**	29.7%	Thoracic Cavity / Extrapulmonary	Moderate	Dedicated high-resolution imaging and comparative analysis with prior historical radiographs.

INVESTIGATIONAL USE ONLY: CliniScan AI is an artificial intelligence research prototype developed for educational and diagnostic decision-support exploration. The predictions, bounding box coordinates, and Grad-CAM heatmaps do not constitute a clinical diagnosis or treatment recommendation. All findings must be confirmed by a licensed medical practitioner.
